## “Challenging The Status-Quo, One Gutter Installation At A Time”

**You Get More For Your Money With The World Gutter System!**  
**Made In USA!**

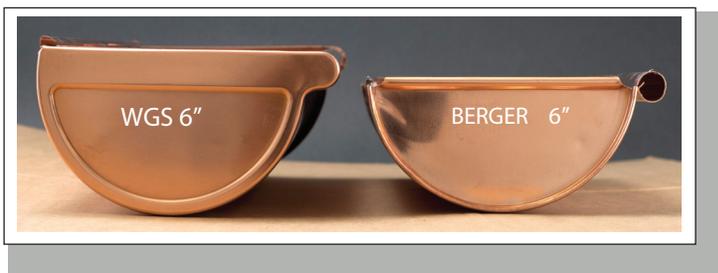

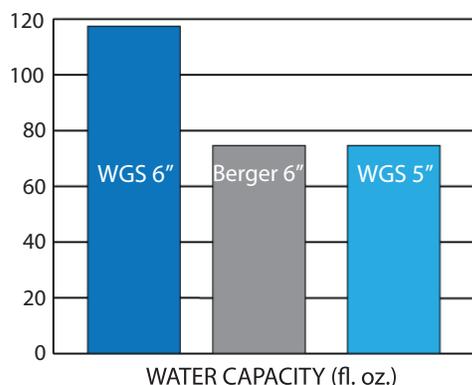

*You Get More Water Carrying Capacity*

For comparison, we took 1-foot sections of 5” and 6” World Gutter Systems Euro Style half round gutter with 2 soldered end caps and a 1 foot section of 6” “American Style” half round gutter with 2 soldered end caps and simply filled each to capacity, then measured the contents of each.

The results speak for themselves.

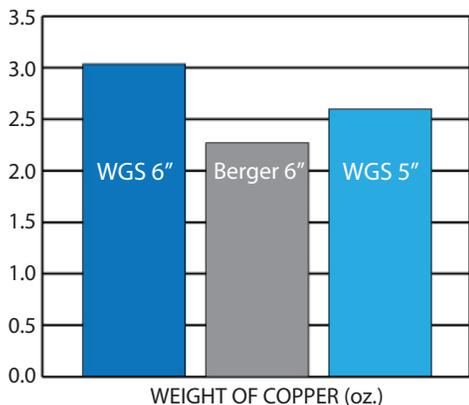

- Our WGS 6 inch half round held 117.4 oz.
- Our WGS 5 inch half round held 74.6 oz.
- The “American” 6 inch half round held 74.6 oz.

That’s **57% MORE** capacity comparing our 6” to theirs and **EQUAL** capacity comparing our 5” to their 6”.

*You Get More Copper With The World Gutter System*

For comparison, we took 2 foot sections of 5” and 6” 16 oz. World Gutter Systems half round Euro Style gutter with 1 hanger and a 2 foot section of 16 oz. “American Style” half round gutter with 1 hanger and measured the weight of each. (24” represents the recommended distance between hangers).

gutter type	coil width	2' gutter w/1 hanger	200' gutter/100 hangers	% +/-
WGS 6"	13.1"	3.0313 lbs.	303.13 lbs.	+33%
Berger 6"	11.5"	2.2727 lbs.	227.27 lbs.	-33%
WGS 5"	11.1"	2.5900 lbs.	259.00 lbs.	+14%

These numbers show for example, that with an average sized 200’ gutter installation you get **74.86 lbs more copper (33%)** and **57% more water volume** by installing our WGS 6” system VS the “American Style” 6” half round and you get **31.73 lbs more copper (14%)** by installing our WGS 5” Euro Style gutter while still getting equal water carrying capacity.
